SYSTEM

Beach Feel

A pool that stands out in hotels and homes

The only certified system on the market

Pools designed to recreate the feeling of being at the beach

A new pool concept through the Beach Feel system, the only one certified in the market. It offers a natural design and an innovative structure of sand pools made with pigmented quartz, fully customized, with an exceptional aesthetic result, long-lasting durability, and a soft touch. This is a system that adapts to any type of substrate.

We provide all the materials needed to apply this system: waterproofing products, vapor barriers for areas with capillary rise, resins, aggregates, and, if required, the necessary tools as well. Our wide catalogue includes irregular or regular shapes, with greater or lesser depth, and progressive slopes that simulate the effect of entering the sea, among others. The result is a non-slip surface, highly resistant to wear and UV rays, suitable for children and pets.

We manufacture all the necessary materials to coat a pool and create a natural, surprising environment. It is possible to achieve a completely new aesthetic or renovate an existing pool by coating it with a compacted sand material combined with polyurethane resin. In this sense, natural quartz delivers excellent results and, depending on the shade used, variations in the color of the water can be perceived.

SYSTEM

Micropool

Water-based decorative polyurethane mortar

Effect of continuous cement with a “trowelled” finish

Continuous coating for pools without the need for joints

This material is defined as a decorative coating due to its composition and finish. As its name “decorative” suggests, it is designed to create attractive finishes where joints are not required, aiming to provide the look and feel of continuous cement.

Micropool allows you to achieve a unique finish thanks to its strong covering power, especially with light colors. Do not think of a conventional pool, since the color options available for this material allow for original design ideas. In addition, Micropool offers resistance to UV rays and atmospheric agents, ensuring long-lasting durability.

If you are unsure about color selection, keep in mind that this product does not yellow and maintains all its properties over time. It is available in standard colors or universal color charts (NCS, RAL, or Pantone).

It is important to highlight that this product can be used both in new construction and in the renovation of existing surfaces.
